Add Object Link	
Here you can add links between individual objects. Most links will be created automatically when you have project links set up.	
You need the management ID for the master and slave objects to create the link.	
The label should be at least two characters long and can contain only alphanumeric characters. The label is normally the two letter code for the target language.	
To set up different link types, go to this page.	
To review and edit individual object links, use this page.

Search for Object Links	
Here you can search for existing object links which you can view and edit.	
To add new object links, use this page.	_
Generally, be sure to specify at least a few constraints. There will usually be many links, and retrieving them all will be a slow process.	971
